

## Data package #4: 2D data reprocessed by GEUS in 2022

Release date: 14th April 2023

### Available processings

- In the first part of 2022 GEUS had a number of lines from vintage surveys in the North-Western and central part of Zealand reprocessed from analogue displays. The reprocessing was carried out in connection to new seismic acquisition and to assist general imaging of the area
- All lines from marine survey PRKL74A (marked in blue on map) and a number of onshore lines (marked in green on map) crossing the Stenllie-Havnsø area was reprocessed
- The output organized in two separate datasets are now available to the public

### General list of deliverables:

(Deliverables will vary for the individual processings. For specific availability, please refer to the processing data content sheets)

- Navigation data
- Seismic data in digital SEGY-format
  - *Be aware that some reprocessings only contains parts of the displayed lines.*
  - *To verify the actual data extent please consult the SP/CDP intervals in the relevant content sheets*
- Velocity data
- Selected scanned 2D displays in tif format
  - Black/white dataset, 400 dpi
  - *Greyscale dataset (400 dpi) available upon request*
  - *Additional displays can be scanned and delivered upon request (additional cost)*
- Relevant reports
